

CCTV UPGRADES

*Providing you with
the latest in CCTV
technology and
advancements to
better
serve your security
needs.*

OUR SERVICE

With security technology continually advancing and with imagery and body movement analytics now available, you may want to consider the advantages of upgrading your existing CCTV.

Our expert team of engineers are trained to provide definitive recommendations on how to best develop your CCTV capabilities. They look to provide you with a conclusive response to your security requirements in line with the latest industry innovations and your budget.

Advances in CCTV capabilities have seen huge improvements in visual and video clarity with the release of high definition, making displays more refined and clearer, even in hours of darkness. There may also be a requirement to modernise infrastructures from your older analogue system into modern IP technology, crucial for real-time monitoring through a smart device.

If you have an existing system in place, we will utilise existing infrastructure and components, when possible and add cameras where required. Where one or two cameras may have previously covered key zones, there may now be a requirement for additional zones to be monitored due to an escalation of a potential threat. Our upgrade service also offers the installation of additional cameras to your existing system for increased coverage.

UPGRADE SERVICES:

- **Adding additional cameras to your current system**
 - **Upgrading from old analogue cameras to high definition**
 - **Moving your system from analogue to IP technology**
 - **Changes to make your system record for longer periods**
 - **Enabling real-time monitoring from your smart devices**
 - **Full replacement of existing system**
 - **Maintenance contracts**
