

GATES & BARRIERS

**GATES &
BARRIERS**

*Achieve the pinnacle
in perimeter security
systems with the
addition to your
property of an
automated gate or
barrier.*

OUR SERVICE

Reduce any doubts you may have in regulating access to your property with the installation of entry gates, barriers, or turnstiles.

Installed in conjunction with a new or existing access control or video entry system, you can create an additional defence infrastructure to protect you, your family, visitors, staff, and belongings on the property, as well as the property itself.

Automated and reinforced security gates work incredibly well at blocking potential attacks, as well as the planning of attacks, as they impair the view onto the property. Barriers are effective at slowing and filtering traffic onto your property and can be utilised successfully alongside a gate. Turnstiles are the perfect solution for high-traffic areas where an ID or security fob system is in place.

Security gates, barriers, and turnstiles also have the benefit of providing privacy and isolation from the outside world, something that is often missing from prominent and high-profile properties. With permanent barriers in place, you can enjoy your property without unwanted outside intrusion.

SERVICE DETAILS:

- **Automated wooden and iron gates**
 - **Electronic and static barrier**
 - **Mechanised turnstiles**
 - **Accompanying access control systems, video entry systems, and programme analytics**
